*Retail sales data from the Mississippi Department of Revenue.

**City/town population estimates for 2021 and 2022 were obtained from American Community Survey (ACS) 5-year estimates. Population estimates for 2023 were calculated by using the average growth rate from ACS estimates for the years 2018-2022.

***City/town per capita income estimates for 2021 and 2022 obtained from Bureau of Economic Analysis (BEA) estimates for the primary county. The per capita income estimate for 2023 was calculated by using the average growth rate from BEA estimates for the years 2018-2022 converted to 2023 dollars using the St. Louis Federal Reserve Bank's estimate of the implicit price deflator.

Data Key

Retail Sales data (total and by sector) were obtained from the Mississippi Department of Revenue Annual Reports for the Fiscal Years 2021, 2022, and 2023.

The Total Retail Pull Factor is calculated as the Trade Area Capture divided by the city/town population. If the Total Retail Pull Factor is equal to or greater than 1.0, this suggests that the city/town is attracting customers from outside its geographic boundaries to spend retail dollars. If the Total Retail Pull Factor is less than 1.0, then this suggests that the city/town is losing shoppers to other geographic areas, thus causing a leakage of trade dollars.

A value of “N/A” for a particular value indicates that this value could not be calculated given the available data.

A value of “N/D” for a particular value indicates that the data was not disclosed in the Department of Revenue’s Annual Report due primarily either to no activity in that sector occurring in the city/town or to confidentiality concerns.

Trade Area Capture estimates the number of shoppers that the city/town serves. It is calculated by multiplying the actual retail sales for the city/town by the per capita retail sales for the state adjusted by income level. If the Trade Area Capture is larger than the population of the city/town, then the city/town is attracting outside shoppers. If the Trade Area Capture is smaller than the city/town, then the city/town is losing shoppers to other geographic areas.

A portion (18.5 percent) of the total sales taxes (except for taxes collected from public utilities and transportation charges) collected from business activities within the boundaries of a municipal corporation will be transferred to the municipal corporation for use in that municipality’s general budget. Data were obtained from various issues of the Mississippi Department of Revenue Annual Report. <http://www.dor.ms.gov/info/stats/main.html>
